

I am a hearing person who has Deaf parents and a Deaf child. Access to readily available communication has always been a challenge for me and my family. Any effort that the FCC can make to remove obstacles to communication between hearing and Deaf people will not only improve my family's life, but the lives of the hearing and Deaf communities all over this country! I strongly encourage the FCC to consider enacting all options that make video communication a fast and effective medium for both the Deaf, hearing and hard of hearing communities.
